

ENVIRONMENTAL MONITORING METHOD:

Night Parrot Acoustic Monitoring – Song Meter Mini

About This Method

This document helps you to monitor Night Parrots by recording their calls using Autonomous Recording Units (ARUs); the Song Meter Mini Acoustic Recorder. This method has been adapted from: [SM Mini for Night Parrots – Quick Guide](#), N. Lesenberg & S. Murphy (Adaptive NRM); [Song Meter Mini 2 User Guide, Wildlife Acoustics](#). You can find more information on the **Monitoring Country** website: <https://monitoringcountry.org.au> or scan the QR code.

This method has three parts: **1. Get Ready**, **2. Out on Country** and **3. Back in the Office**. Each part can be undertaken separately but you must complete all three parts to finish the method. At the end of the document, you will find guidance for all the gear you need - [Gather Your Gear – Complete List](#).

We recommend you read the whole document before you start.

Part 1: Get Ready

GATHER YOUR GEAR

Equipment required for this part:

- Tablets/phones with:
 - ability to take photos
 - data collection and navigation systems
- Laptop or computer with software for:
 - mapping
- GPS device (recommended)
- Song Meter Mini Configurator App
- Song Meter Mini (SM Mini) (1 per site) – check that each has:
 - Microphone
 - Blank SD card with >32 GB capacity
 - Charged batteries (6 Lithium Ion or 8 AA batteries, depending on model)
- Permanent marker

ENVIRONMENTAL MONITORING METHOD:

Night Parrot Acoustic Monitoring – Song Meter Mini

KEEP IN MIND

Why?

Make sure there is a clear [monitoring question](#) and that the [method](#) you have selected will answer the monitoring question.

If this is the first time you are monitoring, you will need to [design the survey](#): what are you monitoring, where will you survey, and when and how often you will survey?

When?

Prepare well before heading out on Country so that you have time to gather gear or train staff, if needed.

Who?

At least 1 ranger/staff to plan and prepare.

Training and skills

Staff involved in planning are trained and competent in:

- Mapping software (like QGIS, Google Earth) and/or [monitoring point generator](#)
- Navigation systems (like Avenza, GPS)
- Data collection systems (like Fulcrum, datasheets)
- Setting up Song Meters and using Song Meter Mini Configurator App

Check permissions

Consult with Traditional Owners, landholders and relevant government agencies and authorities, to determine appropriate access and approvals for environmental monitoring:

1. Where you can go – consult with the owners/managers of the land.
2. What you can do – check if you need [scientific licences or ethics permits](#)
3. What or who can you take photos of
4. What can be done with data and photos – who owns them, where will they be stored and how will data be interpreted and communicated.

ENVIRONMENTAL MONITORING METHOD:

Night Parrot Acoustic Monitoring – Song Meter Mini

ACTIONS

Make a plan and prepare

If you have done this monitoring before, it is best to do the surveys at the same time and same sites so that you can compare the data to previous surveys and see if there have been changes.

1. Plan which dates you will put the Song Meters out and collect them
 - Battery life, SD card size, temperature and recording settings will change how long Song Meters can function.
 - If you are leaving Song Meters out for a long time, plan to service Song Meters to change SD cards and batteries during the survey.
 - Song Meters can be deployed in rounds at different sets of sites if you don't have enough Song Meters for every site (e.g. You have 5 Song Meters but you want to monitor 10 sites for 2 weeks. Deploy Song Meters at 5 sites for 2 weeks, and then redeploy them at the other 5 sites for another 2 weeks. The survey will have two deployments over 4 weeks.)
 - A good time to monitor Night Parrots is after a good rain.
2. Gather Night Parrot [records in your area](#) and identify where potential Night Parrot habitat is.
 - Such as from Traditional Owners, Atlas of Living Australia (ALA) or government databases.
3. Use the [monitoring point generator](#) or GIS mapping software to select your sites
 - Roosting habitat is in long unburnt spinifex, and feeding habitat is near roost sites, where there is water and grasses, herbs and salt bushes
 - Song Meters should be at least 200 metres apart
4. Give each site a unique name, and export and save the location data in your data management system
5. Prepare maps of sites and load sites onto navigation devices
6. Plan how you will record information on Country (electronic or paper data forms)
7. Plan your [data management system](#) (how you will store recordings)
8.  Check **GATHER YOUR GEAR** lists for **Get Ready**, **Out on Country** and **Back in the Office** ([complete list on last page](#)) and get any equipment you don't have.
 - See [buying guide\(s\)](#) for advice on which recording devices may be suitable to buy
 - You will need to decide if you want a Song Meter that used Lithium Ion batteries or AA batteries
9. Charge electronic devices (tablets/phones, power banks) and batteries

ENVIRONMENTAL MONITORING METHOD:

Night Parrot Acoustic Monitoring – Song Meter Mini

✓ Train

1. Check the **Training and skills** requirements for **Get Ready**, **Out on Country** and **Back in the Office** steps and arrange any training or expertise that you need.
2. Run everyone involved in the survey through the plan.
 - Be clear on how many people will be involved, what everyone will be doing, and what they will need to do the survey.
3. Run a training session for all rangers involved in the survey to learn or refresh:
 - a. How to use the devices (tablets/phones, GPS)
 - b. How to use data collections apps and record data
 - c. How to identify Night Parrots and their habitat

✓ Set up the Song Meter Mini

4. Read through the Song Meter Mini 2 User Guide on wildlifeacoustics.com
5. Give the Song Meter Mini a unique name (like SM01) and write it on the outer cover of the Song Meter and on its SD card in permanent marker
 - If you plan to service the Song Meters during the surveys or deploy them at different sites, make sure the Song Meter has another SD card. Write the same unique name on the card and something to show that it is the second card (like SM01.2)
6. Check that the SD card is empty
7. Download the Song Meter Mini Configurator app to your electronic device
8. Take the front cover off the Song Meter
9. Insert SD card into the Song Meter
10. Put charged batteries into the Song Meter
 - Check that you are using the correct battery type (Lithium Ion or AA, depending on model) and they are installed correctly.
11. Turn the ON/OFF switch to ON to set the Song Meter up for recording
 - The ON/OFF switch is on the bottom left of the Song Meter
12. Open the Song Meter Mini Configurator app.
13. In the app, you should see your Song Meter in the list of detected recorders.
 - Make sure that Bluetooth on your device is turned on.
 - If this is the first time using the Song Meter, it will be labelled with the Song Meter's serial number.
14. On the Song Meter, press and hold the PAIR button for about 5 seconds.
 - The PAIR button is next to the ON/OFF switch.

National Environmental Science Program

We acknowledge Aboriginal and Torres Strait Islanders as the Traditional Owners and Custodians of Country and recognise their continuing connection to and stewardship of land, water, and sea. We honour their culture, customs, and community. We pay our respects to their Ancestors, Elders, and future leaders.

ENVIRONMENTAL MONITORING METHOD:

Night Parrot Acoustic Monitoring – Song Meter Mini

15. In the app, tap the PAIR icon that appears next to the Song Meter number to pair the Song Meter with your device.
16. Tap the CONFIGURE icon that appears next to the Song Meter number and change the Recorder Name to the same unique name written on the Song Meter (like SM01).
17. Tap ACOUSTIC SETTINGS to set the following and then return to the CONFIGURE menu:
 - a. Sample Rate = 24000 Hz
 - b. Maximum recording length = 30 min
 - c. Channel = Left (default)
 - d. Left channel gain = 18 db (default)
18. Tap LOCATION & TIME ZONE and set the Latitude and Longitude to the approximate location where the Song Meter will be deployed, then return to the CONFIGURE menu.
 - You can use the coordinates of the site where you plan to put the Song Meter
19. Tap SCHEDULE to set the following so that the top box says Custom Schedule and the return to the CONFIGURE menu:
 - a. START TIME: sunset
 - b. DUTY CYCLE: always
 - c. END TIME: sunrise
20. Tap STATUS to check the following and then return to the main menu
 - a. SD card has available space
 - b. Recorder Time is correct (this is the time of day, and should be the same time as on your phone/tablet)
 - c. Start Time of Next Recording is approximately at sunset
21. Tap the UNPAIR icon.
22. Turn off the Song Meter.

The Song Meter is now ready to be used, and when you turn it on in the field, all of the settings will be retained.

Next Section – Part 2: Out on Country

ENVIRONMENTAL MONITORING METHOD:

Night Parrot Acoustic Monitoring – Song Meter Mini

Part 2: Out on Country

GATHER YOUR GEAR

One set of this equipment for each team:

- Tablets/phones
- Power bank (optional)
- GPS device and spare batteries (recommended)
- Hammer, mallet or picket driver
- Multi-tool or side cutter for snipping cable tie ends
- Spare Lithium Ion or AA batteries (for servicing only)
- Flagging tape (optional)

One set of this equipment for each site:

- Song Meter Mini – with microphone, 6 Lithium Ion or 8 AA batteries, blank SD card
- Star picket
- 300mm x 4.8 m sized cable tie/zip tie

KEEP IN MIND

Where

If stock or other wildlife that might damage Song Meters, you may need to change the timing of the survey, move the site, or use guy lines to keep animals away

Who?

At least 2 people per team

Training and skills

Make sure everyone knows the plan.

Field staff are trained and competent in:

- Navigation systems (like Avenza, GPS)
- Data collection systems (like Fulcrum, paper datasheets)
- Setting up/using Song Meters
- Identifying Night Parrot habitat

National Environmental Science Program

We acknowledge Aboriginal and Torres Strait Islanders as the Traditional Owners and Custodians of Country and recognise their continuing connection to and stewardship of land, water, and sea. We honour their culture, customs, and community. We pay our respects to their Ancestors, Elders, and future leaders.

ENVIRONMENTAL MONITORING METHOD:

Night Parrot Acoustic Monitoring – Song Meter Mini

ACTIONS

Check that your electronic devices (tablets/phones, power banks, GPS, batteries) are charged before you head out.

Deploy Song Meter Mini

1. Check that the site is in or near Night Parrot habitat.
2. Choose a spot to deploy the Song Meter that is:
 - a. At least 1.5 metres away from trees, tall shrubs, large boulders and water
 - b. Away from things that will be noisy, like branches in the wind and flagging tape
 - c. Away from hard, flat surface that will echo, like rock and water
 - d. Above where long grasses may grow while the Song Meter is deployed
3. Mark the Song Meter location on your navigation device
 - You can also attach a piece of flagging tape to something about 1.5 metres away from the Song Meter to make it easier to find again.
4. Hammer in the star picket
5. Attach the Song Meter with a cable tie/zip tie to the stop of the star picket so that it is:
 - a. At least 1 metre above the ground
 - b. Secure/doesn't move around
 - c. Microphone pointed towards Night Parrot habitat
 - d. Microphone horizontal or pointed slightly down
 - This allows rain or dew to drain away.
 - DO NOT POINT THE MICROPHONE UPWARDS.
6. Snip off the ends of the cable tie/zip tie
7. Take the front cover off the Song Meter
8. Check that an SD card is inserted
9. Check that batteries are in the battery bank
10. Turn the ON/OFF switch to ON
 - The ON/OFF switch is on the bottom left of the Song Meter
11. Put the front cover back on the Song Meter
12. Record **deployment data**

Service Song Meter Mini (optional)

1. Take the front cover off the Song Meter
2. Turn the ON/OFF switch to OFF
 - The ON/OFF switch is on the bottom left of the Song Meter

7

National Environmental Science Program

We acknowledge Aboriginal and Torres Strait Islanders as the Traditional Owners and Custodians of Country and recognise their continuing connection to and stewardship of land, water, and sea. We honour their culture, customs, and community. We pay our respects to their Ancestors, Elders, and future leaders.

ENVIRONMENTAL MONITORING METHOD:

Night Parrot Acoustic Monitoring – Song Meter Mini

3. Eject the SD card and replace it with a new, blank SD card
4. Remove the dead batteries and replace them with charged batteries
5. Turn the ON/OFF switch to ON
 - The ON/OFF switch is on the bottom left of the Song Meter
6. Put the front cover back on the Song Meter
7. Check that the Song Meter is still securely attached to the star picket and the star picket is securely in the ground.
8. Clear away any plant growth under the Song Meter that could cause noise.

 9. Record **service data**

Collect Song Meter Mini

1. Take the front cover off the Song Meter
2. Turn the ON/OFF switch to OFF
 - The ON/OFF switch is on the bottom left of the Song Meter
3. Cut the cable tie to remove the Song Meter from the star picket
4. If you don't plan to monitor at the site again, remove the start picket and flagging tape.

 5. Record **collection data**

ENVIRONMENTAL MONITORING METHOD:

Night Parrot Acoustic Monitoring – Song Meter Mini

RECORD DATA

Data to record when deploying Song Meters

What to record	Required?	Notes
<i>Information to record about each ARU deployed</i>		
Project name	Yes	Make it clear which project this data belongs to and its purpose
Date	Yes	Record the date the Song Meter was put out on Country
Personnel	Yes	Record the name of the people who put out the Song Meter - this is helpful if any questions come up about the data
Site name/number	Yes	Record the site name/number where the Song Meter was put out
Location coordinates	Yes	Record an accurate location of where the Song Meter was put at the site (using a handheld GPS if possible) (latitude and longitude or eastings and northings)
Song Meter ID	Yes	Record the name written on the Song Meter
SD card ID	Yes	Record the name written on the SD card.
<i>Information to record about each site</i>		
Fire age	Optional	Record the fire history of the site.
Habitat description and/or photo	Optional	Describe or take a photo of the vegetation/spinifex (like size of spinifex, Night Parrot food plants), habitat type and landscape features at the site (like spinifex near a soak surrounded by samphire and chenopods). Make note of which camera/tablet/phone it was taken on, and the filename of the photo (usually end in .JPG)
Signs of disturbance	Optional	Types and causes of disturbance you can see at the site (like signs of introduced predators, vegetation clearing, wrong-way fire)
Stories and notes	Optional	Record information or stories from Elders, and anything else worth noting about the area or animals.
Video	Optional	Record videos of information or stories from Elders, and rangers performing or describing the work they are doing.

ENVIRONMENTAL MONITORING METHOD:

Night Parrot Acoustic Monitoring – Song Meter Mini

Data to record when servicing Song Meters

What to record	Required?	Notes
<i>Information to check is correct when servicing an ARU</i>		
ARU ID	Yes	Check that the name written on the Song Meter is correct
SD card ID	Yes	Check that the name written on the SD card you take out of the Song Meter matches the Song Meter ID
Location	Optional	Check that the location is correct (using a handheld GPS if possible) (latitude and longitude or eastings and northings)
<i>Information to record about each ARU serviced</i>		
Project name	Yes	Make it clear which project this data belongs to and its purpose
Date	Yes	Record the date the Song Meter was serviced
Personnel	Yes	Record the name of the people who serviced the Song Meter - this is helpful if any questions come up about the data
Site name/number	Yes	Record the site name/number
SD card ID	Yes	Record the name written on the new SD card you put into the Song Meter
Song Meter issues	Optional	Record if anything has gone wrong with the Song Meter (like dead batteries, full SD card, Song Meter damaged by stock or rain, vegetation has grown lots)

Data to record when collecting Song Meters

What to record	Required?	Notes
<i>Information to check is correct when collecting an ARU</i>		
Song Meter ID	Yes	Check that the name written on the Song Meter is correct
SD card ID	Yes	Check that the name written on the SD card you take out of the Song Meter matches the Song Meter ID
Location	Optional	Check that the location is correct (using a handheld GPS if possible) (latitude and longitude or eastings and northings)
<i>Information to record about each ARU collected</i>		
Project name	Yes	Make it clear which project this data belongs to and its purpose
Date	Yes	Record the date the Song Meter was collected
Personnel	Yes	Record the name of the people who collected the Song Meter - this is helpful if any questions come up about the data
Site name/number	Yes	Record the site name/number
Song Meter issues	Optional	Record if anything has gone wrong with the Song Meter (like dead batteries, full SD card, Song Meter damaged by stock or rain, vegetation has grown lots)

Next section – Part 3: Back in the Office

**Night Parrot Acoustic Monitoring
Song Meter Mini**

Get Ready

On Country

In Office

Gear List

Part 3: Back in the Office

GATHER YOUR GEAR

Equipment required for this part:

- Tablets/phones (or paper datasheets) that you used to record data
- Data management system (like databases, cloud storage, external hard drives)
- Laptop or computer with software for:
 - Spreadsheets (like Microsoft Excel)
 - Mapping (like QGIS, Google Earth)
 - Bioacoustic analysis software (like Kaleidoscope)
- SD card from Song Meters

KEEP IN MIND

When?

Always try to complete this work as soon as you can after returning from your time on Country so that recordings on the SD cards aren't overwritten or lost.

Who?

1 person to manage the data

Training and skills

Staff managing data are trained and competent in:

- Mapping software (like QGIS, Google Earth)
- Spreadsheet software (like Microsoft Excel)
- Data collection systems (like Fulcrum)
- Data management systems (like databases, cloud storage, external hard drives)
- Bioacoustic analysis software (like Kaleidoscope)

ACTIONS

Data entry, analysis and reporting

1. Record a summary of what you did and why, any observations (like weather conditions, fire history, site condition), anything that went wrong or didn't work and things that worked well.
2. Upload the **Song Meter deployment, servicing and deployment data** to your data management system.
 - Recommended: get someone else to proof the data to check for mistakes.
3. Upload any photos or videos taken during the survey to your data management system.
4. Remove SD cards from Song Meters
5. Download recordings from SD cards and upload to your data management system.
6. Use the bioacoustics analysis software to check recordings for Night Parrot calls.
 - Pallid Cuckoos calls can sound and have similar looking call signatures to Night Parrots.
7. Contact experts to help confirm Night Parrot calls and check for any that may have been missed
 - Night Parrot calls can vary a lot and can be easy to misidentify.
8. In GIS mapping software, create a map showing the survey sites and where Night Parrots were detected
9. Discuss with the ranger team or community the results of the monitoring, any reasons for the presence or absence of Night Parrots, and if there have been any changes to previous years.
 - Consider whether trends might be related to your management (like cat control or fire management) to check how well management is working, or if you need to make adjustments.
10. Share the data according to any data sharing or funding agreements you have made
